Hello,

I'm a motivated and curious developer, looking for opportunities that are challenging enough for my skill and give me a push to explore and learn new things. From my college days, I have been working on various web-related projects. I have worked as a full-stack developer who built UI and backend for the web application which we hosted as registrations and events tracking web application in real-time. Later I worked on several projects that were more than a simple client-server interaction types. I have learned a lot of things from every project I did and made progress to achieve the best possible at that time. Apart from developing I've also concentrated on optimizations, scaling and problem determination for a given application. That's how I learned to build a full-scale application from end to end. Also, in free time, I contribute to open-source projects as both front-end and back-end developer. Currently, I'm leading the development team at Coderplex(<https://github.com/coderplex/>).

I've worked as an Intern at Verzeo Edutech, where I developed UI for page mocks they provided and also lead the team of interns. My second internship was with ServiceNow where I built a full, end to end feature solely. Initially, I was asked to just make a proof of concept, but I proactively engaged with the team and made the POC in very less time. This gave me a chance to build the feature by my-self. I wrote the UI and backend logics for the feature and integrated it with the existing infrastructure without making any breaking changes. I feel that the experience that I gained while working on various kinds of projects in my college time and contributing to open-source helped me a lot to understand and align with the teams at corporates. Also, I feel that experience can be equally matched with commercial experience because none of those were personal projects and almost every project I involved in went live. Currently, I'm working for NCR where my work is to automate build and integration pipelines through Jenkins and enhancing the products related to Customer Experience Marketing in ATMs(working with Web-Services, C#, .NET). I have attached my resume and links to my profiles in the latter part of the mail. Please go through them.

To conclude, I want to say that I'm very excited to work with you people which could provide me the chance to work on projects that are diverse and challenging for me. I feel that I can be the best fit for you and I can bring value to the company.

Thank you.

Regards,
Krushiraj Tula
